

Project 3 Summary

Feature extraction, running time (cost)

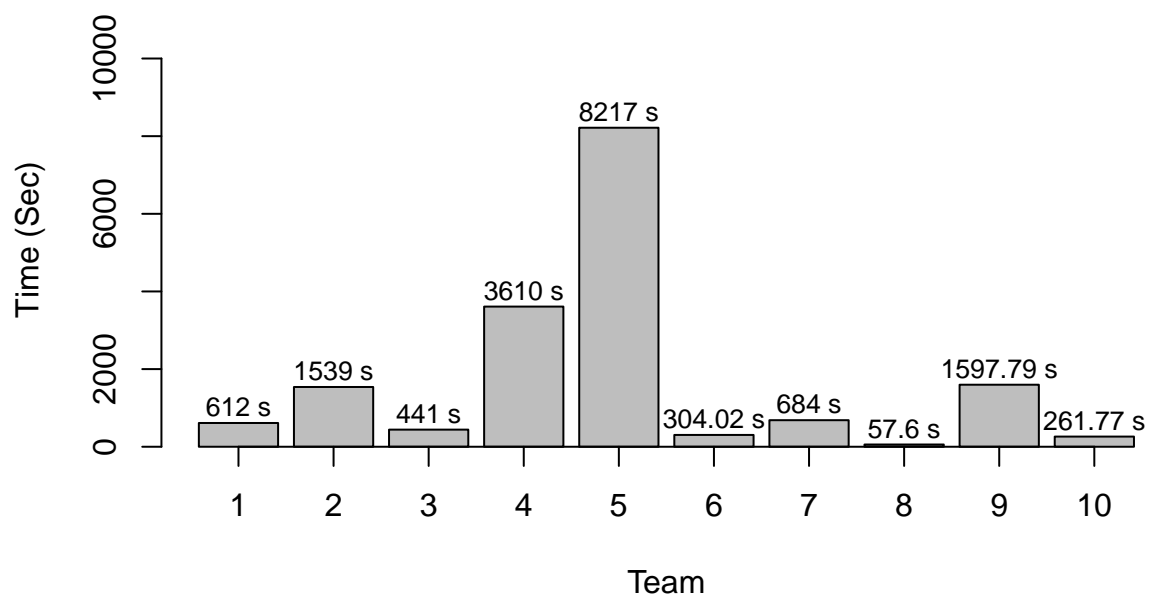

Training Time

Model I Training Time (s)

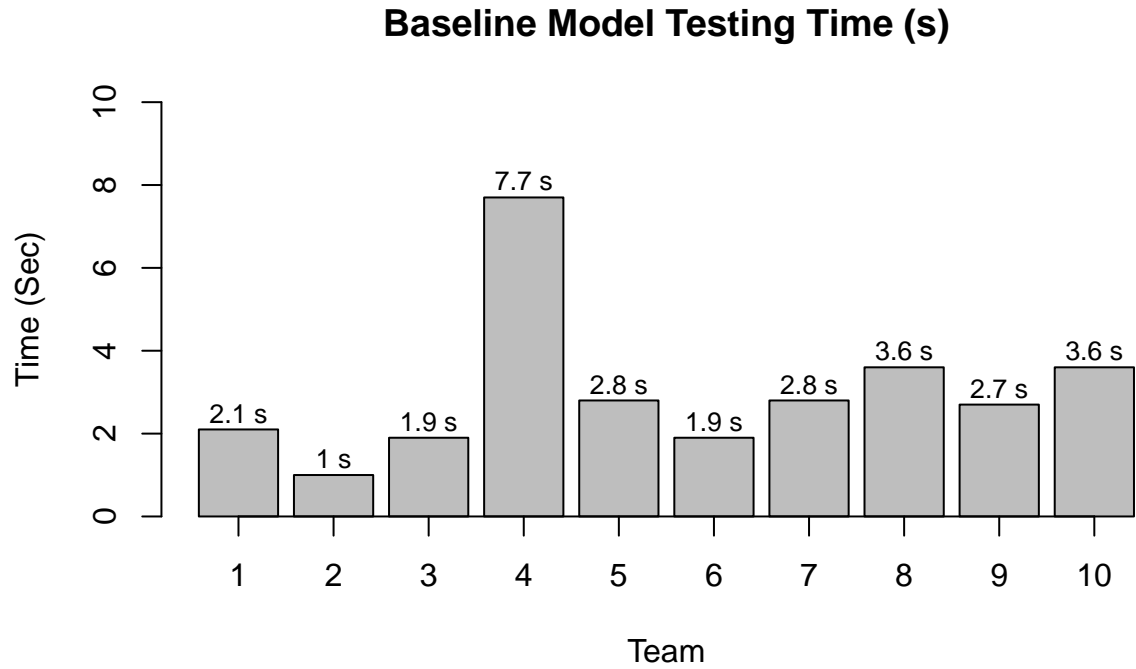

Model II Training Time (s)

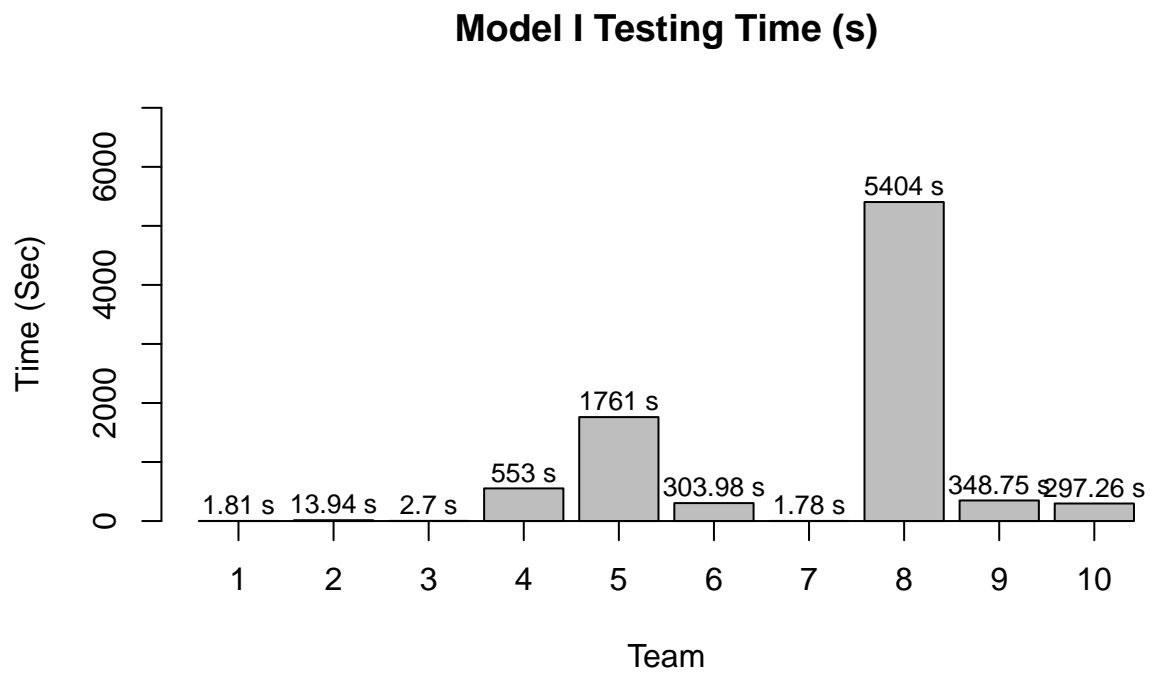

Testing Time

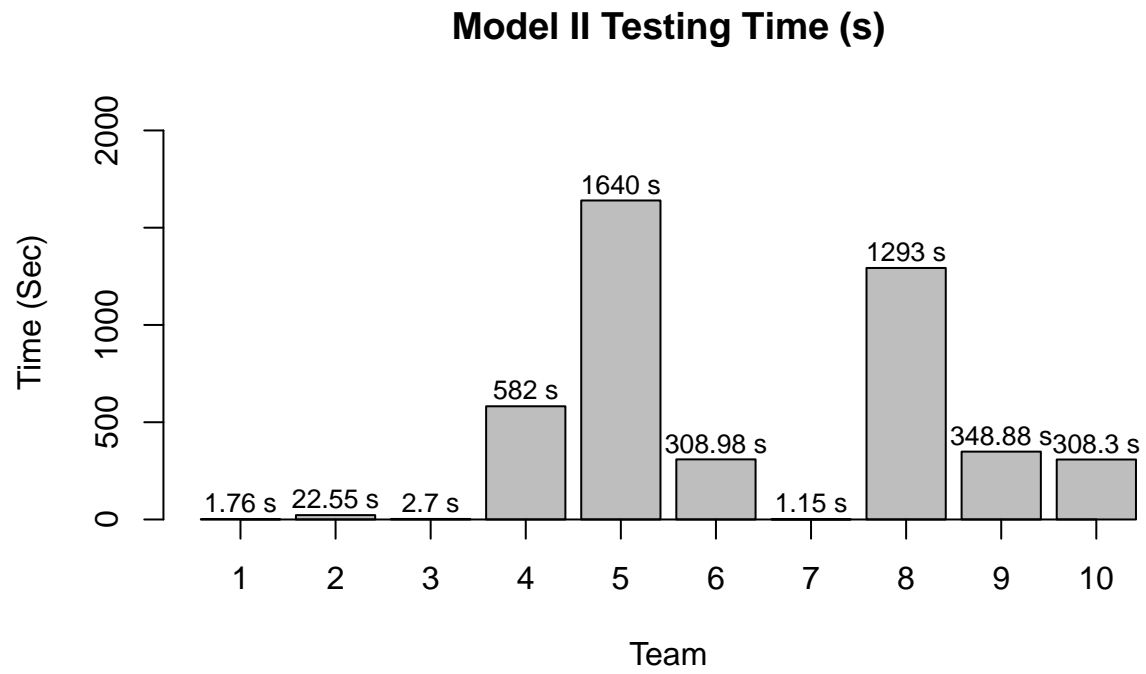

Is the baseline model testing time < 20s?

Is the model I testing time < 60s?

Is the model II testing time < 60s?

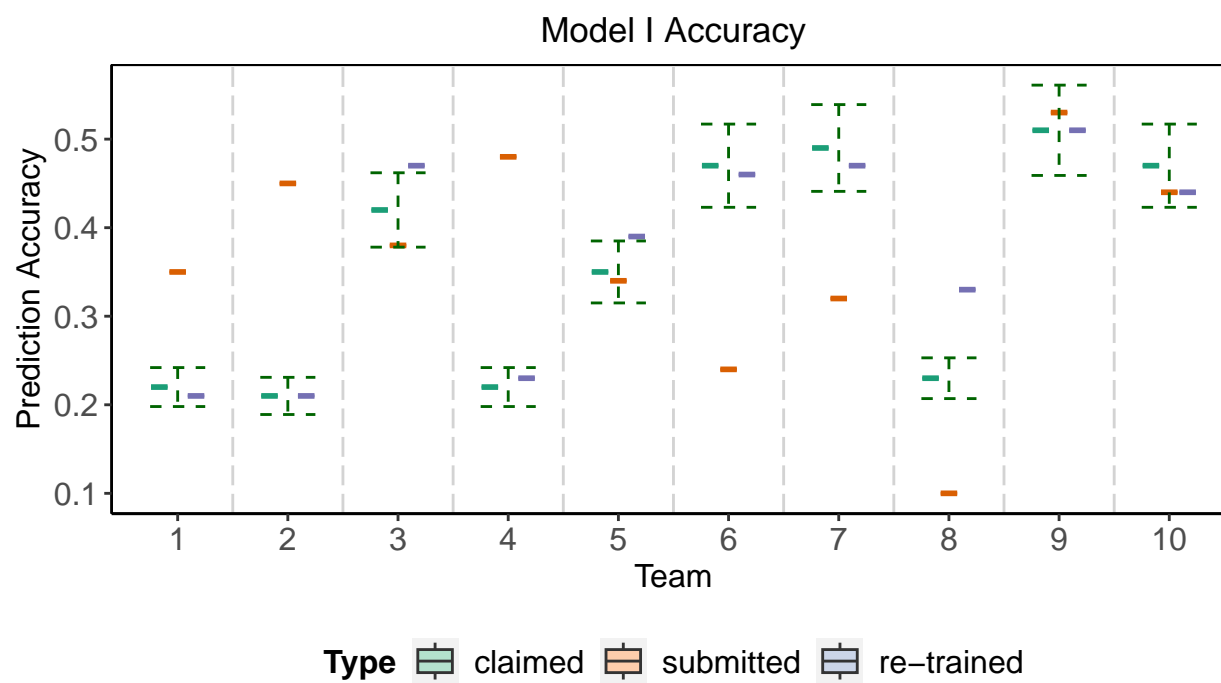

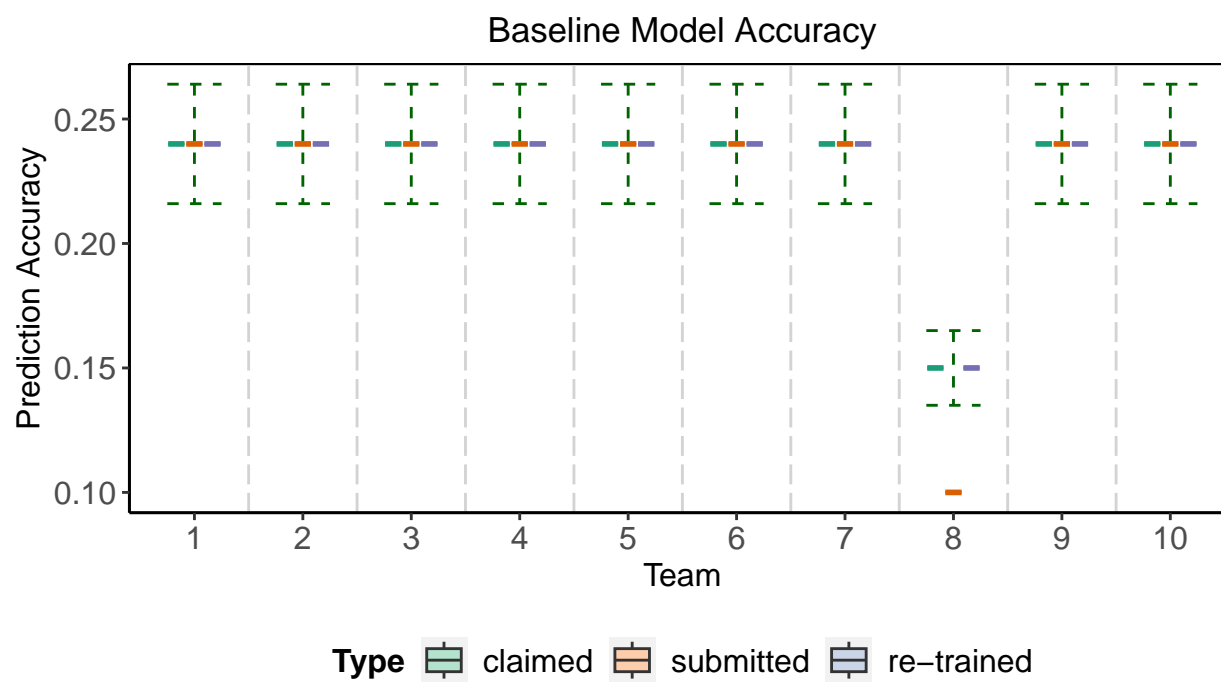

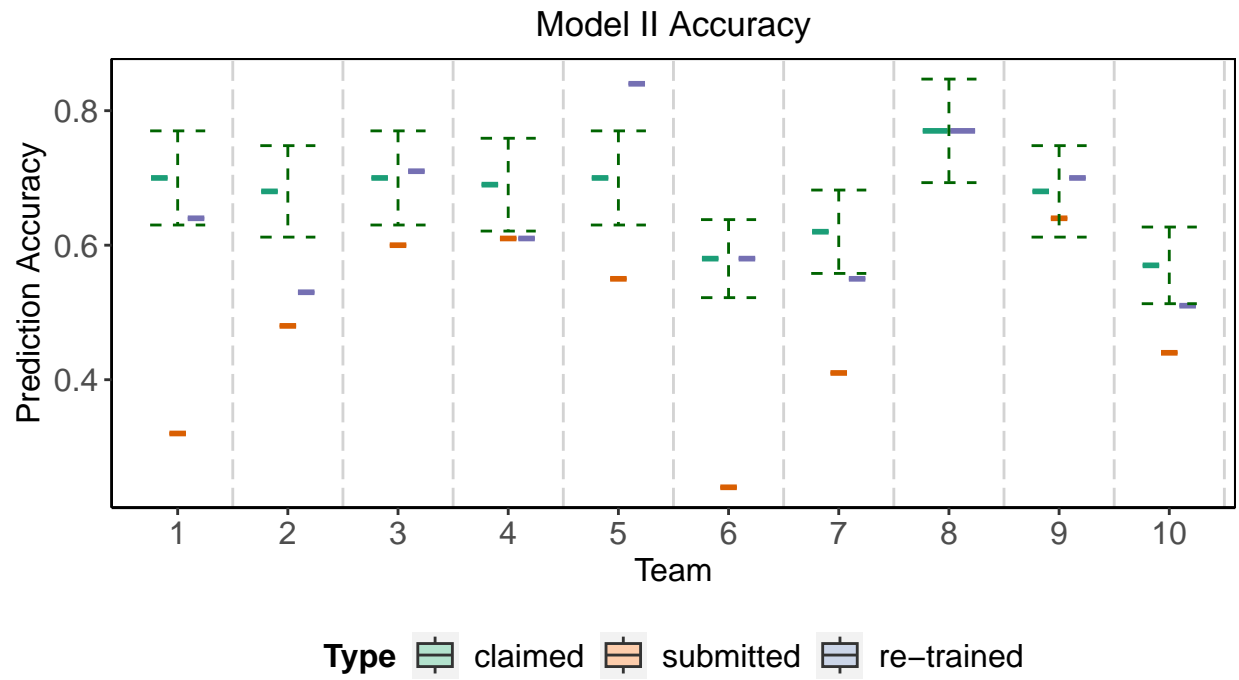

Performance

Compared Between Claimed, Submitted and Re-trained Accuracy

Is the accuracy based on the submitted prediction within 10% of the claimed accuracy?

Vertical dashed green line is the range that covers 10% of the claimed results.

Compared Between Baseline and Advanced Models

Did the proposed model I (darker color) perform better than the baseline model(lightest color)? How was the affect after adding weakly-supervised learning technique (model II: darkest color)?
